SUMMARY

Customer-facing product engineer with 3+ years building and operating AI, fintech, and data products in startups. Turns user problems into working prototypes and production systems, with hands-on work across integrations, infrastructure, and QA.

EXPERIENCE

Ordinal Hive — seed-stage AI/Bitcoin startup — Remote

Co-Founder, Engineering — *Jul 2023 – Present*

Agentic Trading Terminal

- Developed a natural language interface that lets users research live markets and execute orders across Hyperliquid and Robinhood without switching between venue dashboards
- Built the MVP in three weeks, integrating LLM tool calling (MiniMax model) with MCP/CLI-based market data workflows; added explicit user approval, input validation, execution tracing, and failure handling for safe order placement
- Implemented agent evaluations that verify the model picks the right tool, fills order parameters correctly, asks for clarification when unsure, and never claims a trade it did not place; ran them automatically in GitHub Actions to catch regressions

Bitcoin Digital Asset Trading Platform

- Launched a pilot program with 3K+ early users, traced their reported failures to gaps in testnet coverage, and architected an automated live-transaction validation protocol that became the team's release standard and cut recurring production incidents by an estimated 60%
- Operated multi-cloud production infrastructure (AWS, OVHcloud, Render, Proxmox) with Sentry observability and access control for 10+ collaborators; migrated production workloads, wallets, and user data off a legacy provider with zero data loss
- Built and grew the Discord community from 0 to 8K members with automation bots integrating Bitcoin on-chain data and purchase tracking: 200+ raffles and 30K+ participant entries
- Co-managed two NFT collection launches end to end: outreach, launch tooling, live event, post-launch support. Worked with 200+ partner communities; collections reached $200K market cap

Advance Int'l Trading Inc. — Corona, CA

Technical Sales & Product Operations Associate (part-time) — *Sep 2024 – Aug 2025*

- Ran a one-person e-commerce operation across eBay, Amazon, and Facebook Marketplace: sourcing, hardware testing/diagnostics (servers, SSDs, UPS), pricing, fulfillment, and customer support, growing monthly revenue from $1K to $6K on ∼10 hrs/week

LEAP Career Forum — Remote

Engineering Lead — *Jan 2023 – Jan 2024*

- Led 4 developers building a React and Django REST community platform; ran weekly standups and designed UI flows in Figma
- Configured and secured production infrastructure (domains, server setup, DNS routing); supported users during events and RSVP management

PERSONAL INFRASTRUCTURE & AI PROJECTS

OpenClaw Agent Hub — Self-hosted, in production

Personal project — *Jan 2026 – Present*

- Deploy and operate a self-hosted OpenClaw agent framework on Hetzner after migrating it from DigitalOcean; built a bilingual English/Mandarin AI persona with Telegram integration for daily use
- Engineered hybrid model routing with ChatGPT Astra as the primary model and MiniMax as a lower-cost fallback for outages or rate limits

EDUCATION

University of Southern California | M.S. Data Science — Aug 2025

Northeastern University | B.S. Computer Science — 2018 – 2022

TECHNICAL SKILLS

Programming:	Python, JavaScript, TypeScript, SQL
Backend and Web:	Django REST Framework, Node.js, React, Next.js, REST APIs, OAuth
AI Engineering:	LLM APIs, tool calling, MCP, agent workflows, fallback routing, agent evaluation
Infrastructure:	Git/GitHub, GitHub Actions, AWS EC2, Docker, Linux, DigitalOcean, Hetzner, Render, Proxmox, Sentry, Tailscale
Data:	PostgreSQL, Redis, Pandas, NumPy, blockchain analytics, geospatial analysis
