SUMMARY

Customer-facing product engineer with 3+ years building and operating AI, fintech, and data products at startups. Works with users to turn problems into prototypes and production software, then supports integrations, infrastructure, and QA. Open to customer travel.

EXPERIENCE

Ordinal Hive, seed-stage AI/Bitcoin startup — Remote
Co-Founder — *Jul 2023 - Present*

Agentic Trading Terminal

- Built a trading workspace where users research live Polymarket and Hyperliquid markets in plain English and prepare orders for wallet review.
- Delivered a working MVP in roughly three weeks for founder testing, integrating MiniMax tool calling with live market APIs. Manual orders use deterministic routing, typed validation, user confirmation, and connected-wallet signing.
- Built an 11-case evaluation harness for the model's first decision: tool choice, extracted arguments, clarification, and false claims that a trade completed. Added offline dataset validation to GitHub Actions; the harness does not execute tools.

Bitcoin Digital Asset Trading Platform

- Led QA by turning user-reported failures into reproducible test cases. Introduced a live-transaction validation protocol that became the team standard for gaps between testnet and production.
- Operated production infrastructure across AWS EC2, OVH Cloud, Render, and Proxmox, handling deployments, server setup, and Sentry monitoring. Managed GitHub, Linear, and cloud access for 10+ collaborators.
- Carried out a production migration with zero data loss: backed up Docker volumes and deployment configurations, transferred wallets and critical user data, verified the transfer, and securely decommissioned the old server.
- Built and grew a Discord community from 0 to 8K members with bots using Bitcoin on-chain data and purchase tracking. Supported 200+ raffles and 30K+ participant entries.
- Co-managed two NFT launches, from outreach and launch tooling to live events and support. Worked with 200+ partner communities; the collections reached $200K market cap.

Advance Int'l Trading Inc. — Corona, CA
Technical Sales & Product Operations Associate (part-time) — *Sep 2024 - Aug 2025*

- Ran e-commerce operations solo across eBay, Amazon, and Facebook Marketplace: sourcing, hardware diagnostics (servers, SSDs, UPS), pricing, fulfillment, and support. Grew monthly revenue from $1K to a $6K peak on about 10 hours per week.

LEAP Career Forum — Remote
IT Specialist & Team Lead — *Jan 2023 - Jan 2024*

- Led four developers building a community platform with React and Django REST. Ran weekly standups and collaborated on designs in Figma.
- Set up and secured production servers, domains, and DNS routing. Supported users during events and managed RSVPs.

PERSONAL INFRASTRUCTURE & AI PROJECTS

OpenClaw Agent Hub — Self-hosted, daily use
Personal project — *Jan 2026 - Present*

- Run OpenClaw on Hetzner after migrating it from DigitalOcean. Built an English/Mandarin persona and connected it to Telegram for daily use.
- Configured Claude Opus as the primary model and MiniMax as a lower-cost backup during provider outages or rate limits.

EDUCATION

University of Southern California | M.S. Data Science — Aug 2025
Northeastern University | B.S. Computer Science — 2018 - 2022

TECHNICAL SKILLS

Programming: Python, TypeScript, JavaScript, SQL
Backend & web: React, Next.js, Node.js, NestJS, Django REST Framework, REST APIs, OAuth
AI engineering: LLM tool calling, agent evaluation, deterministic routing, human-in-the-loop workflows, model fallback
Infrastructure: PostgreSQL, Redis, BullMQ, Docker, Git/GitHub, GitHub Actions, AWS EC2, Render, Linux, Sentry
Additional: DigitalOcean, Hetzner, Proxmox, Tailscale, Pandas, NumPy, blockchain analytics, geospatial analysis
