SUMMARY

Customer-facing product engineer with 3+ years building and operating AI, fintech, and data products in startups. Translates user problems into prototypes and production systems spanning integrations, infrastructure, and QA. Open to relocation and customer travel.

EXPERIENCE

Ordinal Hive — seed-stage Bitcoin/AI startup Remote
Co-Founder Jul 2023 – Present

- **Agentic Trading Terminal**
 - Developed a natural-language trading terminal to address fragmented trading workflows, unifying Polymarket and Hyperliquid within a single conversational interface
 - Built a functional MVP in three weeks, integrating MiniMax tool calling with MCP/CLI-based market-data workflows; currently validating end-to-end reliability and failure handling
- **Bitcoin Digital-Asset Trading Platform**
 - Led QA by translating user-reported failures into reproducible test cases; introduced a live-transaction protocol after identifying gaps in testnet validation, which became the team standard and helped reduce recurring production incidents by an estimated 60%
 - Operated multi-cloud production infrastructure (AWS, OVH Cloud, Render, Proxmox) — deployments, server configuration, and observability via Sentry; managed access control across GitHub, Linear, and cloud environments for 10+ collaborators
 - Executed a production migration from a legacy cloud provider by backing up Docker volumes and deployment configurations, migrating wallet and critical user data, and securely decommissioning the old server with zero data loss
 - Built and grew the Discord community from 0 to 8K members with automation bots integrating Bitcoin on-chain data and purchase tracking — 200+ raffles and 30K+ participant interactions
 - Co-managed two NFT collection launches end to end — outreach, launch tooling, live event, post-launch support — coordinating collaborations with 200+ communities; collections reached \$200K market cap

Advance Int’l Trading Inc Corona, CA
Technical Sales & Product Operations Associate (part-time) Sep 2024 – Aug 2025

- Ran a one-person e-commerce operation across eBay, Amazon, and Facebook Marketplace — sourcing, hardware testing/diagnostics (servers, SSDs, UPS), pricing, fulfillment, and customer support — growing monthly revenue from \$1K to \$6K on ~10 hrs/week

LEAP Career Forum Remote
IT Specialist & Team Lead Jan 2023 – Jan 2024

- Led a team of 4 developers building the nonprofit community’s platform end to end — React frontend, Django REST backend with dynamic data APIs — through weekly standups and Figma-based design collaboration
- Configured and secured production infrastructure (domains, server setup, DNS routing); supported users end to end through event operations and RSVP management

PERSONAL INFRASTRUCTURE & AI PROJECTS

OpenClaw Agent Hub Self-hosted, in production
Personal project Jan 2026 – Present

- Deploy and operate a self-hosted OpenClaw agent framework on Hetzner after migrating it from DigitalOcean; built a bilingual English/Mandarin AI persona with Telegram integration for daily use
- Engineered a hybrid LLM fallback architecture with Claude Opus as the primary model and MiniMax as the fallback for cost and reliability

EDUCATION

University of Southern California — M.S. Data Science August 2025
Northeastern University — B.S. Computer Science 2018 – 2022

TECHNICAL SKILLS

Programming: Python, JavaScript, TypeScript, SQL
Backend and Web: Django REST Framework, Node.js, React, Next.js, REST APIs, OAuth
AI Engineering: LLM APIs, tool calling, MCP, agent workflows, fallback routing, prompt evaluation
Infrastructure: Git/GitHub, GitHub Actions, AWS EC2, Docker, Linux, DigitalOcean, Hetzner, Render, Proxmox, Sentry, Tailscale
Data: Pandas, NumPy, blockchain analytics, geospatial analysis
